

A top-down view of various fresh vegetables including tomatoes, carrots, parsley, cucumbers, and bell peppers arranged around a central text area on a rustic wooden surface.

OUR PROJECT WHIRLS AROUND :

- Food Donation
- Online Food Delivery
- Nutrition & Diet
- Imparting Recipes

FOOD DONATION :

KEY FACTORS

1. Efforts to reduce hunger and eliminate waste.
2. Encouraging foodies to share their passion while contributing to a good cause.
3. The app targets anyone who wants to donate or receive food.

FUNCTIONING :

- App provides an interface between owners and NGOs involved in distributing excess food eateries and will help prevent wastage.
- Donor can register on the app , then add the below information
 1. Name of the food item and excess quantity.
 2. Location or contact details.
- Both donors and recipients can view the list of available food donors and recipients.
- After certain time amount of time the food post entries are automatically deleted from the donor and recipient lists.

ONLINE FOOD DELIVERY :

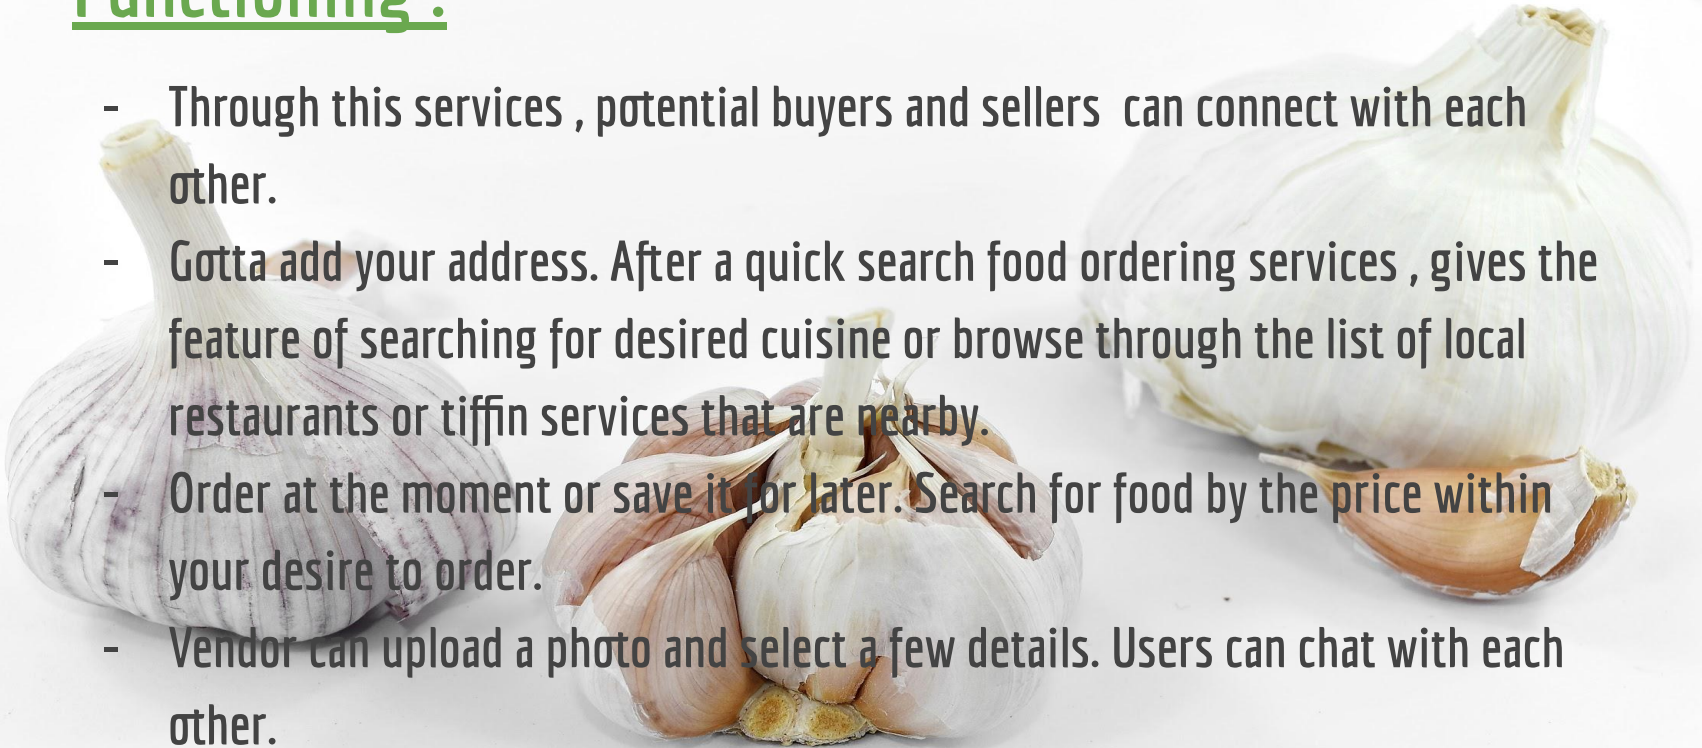

KEY FACTORS :

1. For people living in the outskirts of the cities , restricted privilege has now will be replaced. Delivery of food in remote and faraway places.
2. Restaurants & small scale businesses does not need to do promotions. Online platform is providing enough promotions.
3. Location based deals , can tempt and lure customers.

Functioning :

- Through this services , potential buyers and sellers can connect with each other.
- Gotta add your address. After a quick search food ordering services , gives the feature of searching for desired cuisine or browse through the list of local restaurants or tiffin services that are nearby.
- Order at the moment or save it for later. Search for food by the price within your desire to order.
- Vendor can upload a photo and select a few details. Users can chat with each other.
- Commissions - vendors have to pay 15% to 25% on every order placed on website.

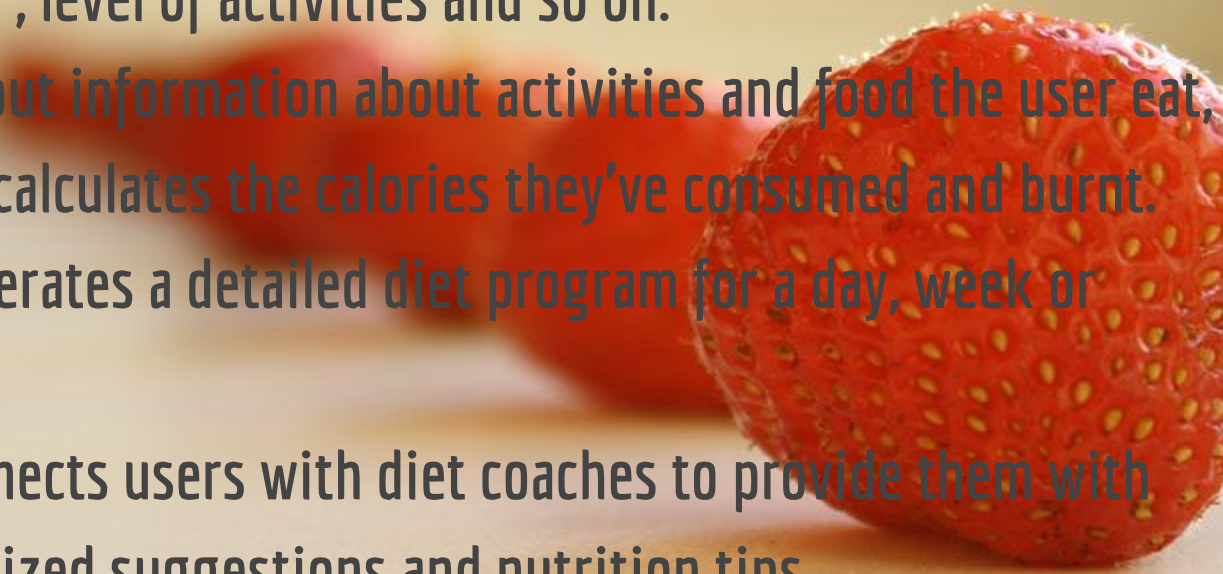

NUTRITION AND DIET

KEY FACTORS

1. Will save you the cost of going to the gym.
2. Change your lifestyle , smartphone can be your fitness trainer, counsellor and dietician.

FUNCTIONING

- Gather and analyse user data : age, weight, preferred diet, allergies , level of activities and so on.
 - After input information about activities and food the user eat, the app calculates the calories they've consumed and burnt.
 - App generates a detailed diet program for a day, week or months.
 - App connects users with diet coaches to provide them with personalized suggestions and nutrition tips.
- 
- A close-up photograph of two ripe, red strawberries with yellowish-green seeds. One strawberry is in sharp focus in the foreground, while the other is slightly blurred in the background. They are resting on a light-colored, possibly white, surface.

IMPARTING RECIPES :

KEY FACTORS :

1. Provides millions of recipes over the world with different tastes.
2. The user can make the items by simply following the instructions provided by our app.

FUNCTIONING

- The user can search the dishes via location, taste, health, season and many other options.
- Tutorials include photos and videos of making the dishes that helps users to make the items in an easy way.
- Gives users to save and to print recipes, for them to make the same meal again.

A still life composition on a dark, textured background. In the upper left is a single, ripe red tomato. To its right is a bunch of fresh green herbs, possibly dill. Below the tomato and herbs are several slices of a golden-brown baguette. A single cinnamon stick lies diagonally across the bread slices. To the right of the bread and cinnamon is a large, rectangular piece of aged, yellowish parchment paper with a slightly torn edge. The words "THANK YOU" are superimposed in a bold, green, sans-serif font across the center of the image, partially overlapping the tomato, herbs, and bread.

THANK YOU
